RBP Tool

Requirements, Batches and Production Management Tool is a web based application built to maintain and manage all requirements and issues for all particular sites on a multinational enterprise. This tool is developed using .net Framework (MVC with C#), also Twitter Bootstrap was used for the front-end. The app used Entity Framework to interact with a SQL Server Database hosted on a local server and LINQ for other SQL scripts.
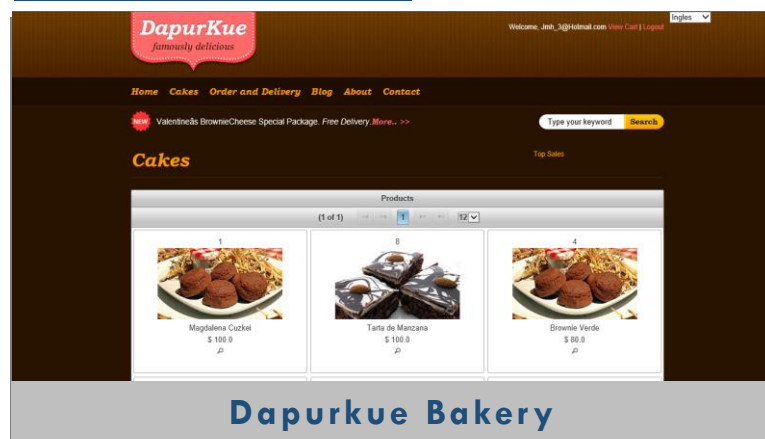

https://github.com/JosueMartinez/RBPTool

VIA

VIA App was designed to allocate all individual tools used for every different department on site, is more like an ERP or BackOffice. It includes tool for finance, accounting, Call Center, sales and marketing. This tool is developed using .net Framework (MVC with C#), also Twitter Bootstrap was used for the front-end. The app used Entity Framework to interact with a SQL Server Database hosted on a local server and LINQ for other SQL scripts.

Dapurkue Bakery

Is a web app used to display the costumers their favorite desserts and give them the option to shop online by registering to the app. Users can add products to their shopping cart and order them. I built the project all by myself, both front-end and back-end. For the client side I used HTML5, CSS3 and JavaScript. For the back-end used JSF and EJB. The persistence of the site was controlled with a PostgreSQL database using JPA.

🖼 PORTFOLIO

Multigomas Tire Shop

My client owns a tire shop and he wanted to expand his business being able to sell his products online. Costumers could register on the site and start searching for the right tires for their vehicles, order them, pay online and wait for them to be shipped. To fulfill his requirements I built a website using HTML5, CSS and JavaScript for the front-end and ASP .NET razor engine with C# for the back-end. The persistence of the application was handled using a SQL Server database.

Fritoboo

This project was developed using HTML and CSS for the views and JSP technology for the server side. Twitter Bootstrap and JavaScript was used for the front-end. The project focus on the social relationships between registered users. Most of the functionalities of Facebook. Users are able to register on the application and there are many types of roles for them. Users need to provide personal information, places of interest, places where have lived, places where have worked and others in order to get suggestions for new friends according to these preferences.

Mh Soft

App intended for commercial purpose. Companies use it to manage their business according to sales, accounting, human resources, warehouse, etc. It is a desktop based application developed using C# and other .net tools besides DevExpress
